

### **CEN3024C Module 7 Project**

For this project we will be implementing unit tests in our PizzaRestaurant application using in-memory and mocking strategies.

Use the CustomerRepository and CustomerService tests in the project repo as a reference to create tests for the corresponding PizzaRepository and PizzaService methods. For the PizzaRepository class, create an in-memory test class and a mocking test class. For the PizzaService class you only need a mocking test class.

Submit your project and screensnips showing your test results to the GitHub classroom repo.
